

# OdpDown Demo

---

[tbehrens@acm.org](mailto:tbehrens@acm.org)

# Basic Markup

---

First Level Header

=====

Second Level Header

-----

This is a simple paragraph of text, written in a plain text file and flown with fixed 50 characters per line, like a plaintext email.

You can also write emphasis, or **strong** emphasis, or even ****double-emphasis**** in your text.

Here's how the slides look:

# First Level Header

---

# Second Level Header

---

This is a simple paragraph of text, written in a plain text file and flown with fixed 50 characters per line, like a plaintext email.

You can also write *emphasis*, or **strong** emphasis, or even ***double-emphasis*** in your text.

# Blockquote Markup

---

## An alternative way to mark 2nd Level Headers

```
> This is a blockquote. You can write entire paragraphs
> like that. Again, this is very similar to how emails
> are formatted and written.
> Consider markdown inspired by plain-text email.
>
> And some more text in this blockquote, of course you
> can again use emphasis, or strong emphasis, or
> even double-emphasis in your text. But wait,
> there's more!
>
```

# An alternative way to mark 2nd Level Headers

---

“This is a blockquote. You can write entire paragraphs like that. Again, this is very similar to how emails are formatted and written. Consider markdown inspired by plain-text email. And some more text in this blockquote, of course you can again use *emphasis*, or **strong** emphasis, or even ***double-emphasis*** in your text. But wait, there's more!”

# List Markup

---

## ## Lists

Unordered (bulleted) lists use either asterisks, plusses, or hyphens (\*, +, and -) interchangeably as list markers:

- \* item one
- \* item two
- + item three
- item four

# Lists

---

Unordered (bulleted) lists use either asterisks, plusses, or hyphens (\*, +, and -) interchangeably as list markers:

- item one
- item two
- item three
- item four

# Nested List Markup

---

## ## Nested Lists

Nest lists by indenting subordinate items:

- \* item one
  - item one.one
    - \* item one.two
- + item three
  - item four

# Nested Lists

---

Nest lists by indenting subordinate items:

- item one
  - item one.one
  - item one.two
- item three
- item four

# Hyperlink Markup

---

## `## Links`

`This is [an example](http://example.com/  
"Title") inline link.`

`This is [an example][1] reference-style  
link.`

`[1]: http://example.com/ "Optional  
Title Here"`

# Links

---

This is [an example](#) inline link.

This is [an example](#) reference-style link.
